e-Lab 5

Boaz

Good morning!

Please make sure your **microphone** and **camera** are **OFF**

We'll take a break or two 

Lab 4 (MTurk)

Step 1: Upload HITs

Step 2: MTurker

Step 3: Download assignments

External Question

Why?

The most flexible

Multiple HTML Files

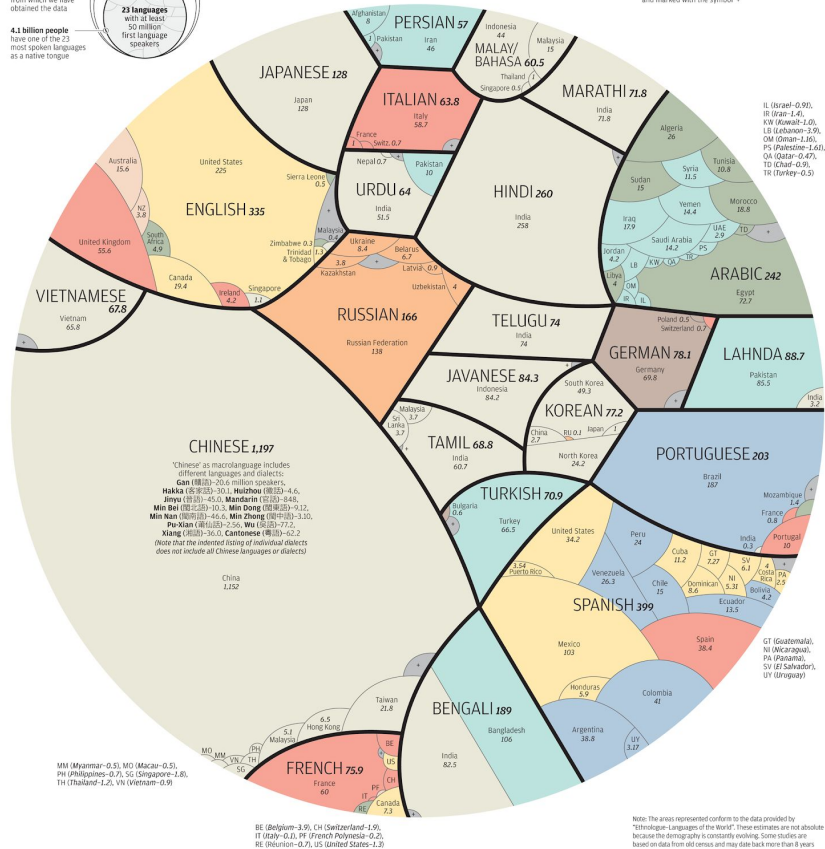

One HTML file

There are at least 7,102 known languages alive in the world today. Twenty-three of these languages are a mother tongue for more than 50 million people. The 23 languages make up the native tongue of 4.1 billion people. We represent each language within black borders and then provide the number of native speakers (in millions) by country. The colour of these countries shows how languages have taken root in many different regions

4.1 billion people — have one of the 23 most spoken languages as a native tongue

Regions in which these languages are present

● Countries whose figures in each language is too small to be represented have been put into a single group and marked with the symbol '+'

Note: The areas represented conform to the data provided by "Ethnologue-Languages of the World". These estimates are not absolute because the demography is constantly evolving. Some studies are based on data from old census and may date back more than 8 years

Some User Interface Examples

Please rate the arousal of the tweet:

- ☐ Calm
- ☐ Dull
- ☒ Neutral
- ☐ Wide-awake
- ☐ Excited

Please rate the dominance of the tweet:

☐ Independent

 Please select one of these options.

- ☐ Neutral
- ☐ Powerlessness
- ☐ Dependent

Submit

[Report this HIT](#) ▼ | [Why Report](#) ▼

Tweet content

Adam Schiff will be compelled to testify should the Democrats decide, despite the fact that my presidential conversations were totally appropriate

Your emotion ratings

 Valence rating*

- ☐ Pleasant

☐ Level 2: Powerful

☐ Level 1: Independent

while doing so. She lost Congress once, she will do it again!

Choose the emotion that matches your feeling.

How much valence do you feel in this tweet? (Valence rating)

☐ Pleasant

☐ Pleased

☐ Neutral

☐ Unsatisfied

☐ Unpleasant

How much Arousal do you feel in this tweet? (Arousal rating)

☐ Excited

☐ Wide-awake

☐ Neutral

☐ Dull

☐ Calm

How much dominance do you feel in this tweet? (Dominance rating)

☐ Dependent

☐ Powerlessness

☐ Neutral

☐ Powerful

☐ Independent

Time left: 5 seconds

I believe in sending flowers, and paying for dinner, opening doors and making plans, planning road trips, and PDA and saying I love you and always being fucking old fashioned. 🏴‍☠️

Please read the tweet above before you answer the question below !!

How much pleasure you feel about the tweet ?

How much arousal you feel about the tweet ?

How much dominance you feel about the tweet ?

7 Seconds more to load the submit button

Tweet

Donald J Trump Simpson
@FackDonaldTrump

The Never Trumper Republicans, though on respirators with not many left, are in certain ways worse and more than the Do Nothing Democrats. Watch out for them, they are human scum!

Q: After reading the above tweet, please choose the best-match emotion respectively.

Valence rating

- ☐ 5 Pleasant
- ☐ 4 Pleased
- ☐ 3 Neutral
- ☐ 2 Unsatisfied
- ☐ 1 Unpleasant

Arousal rating

Please read the following tweet:

When the impeachment-sham inevitably joins comey-gate, collusion-delusion, mueller-investigation-nothing-burger, and fake-dossier in historv's trash heap. what hoax will the radical left. deep state. and left leaning media push next?

After reading this tweet, please

How much "pleasant" does this tweet imply ?

☐ 5 (Pleasant)

How much "pleasant" does this tweet imply ?

Please read the following tweet:

When the impeachment-sham inevitably joins comey-gate, collusion-delusion, mueller-investigation-nothing-burger, and fake-dossier in historv's trash heap. what hoax will the radical left. deep state. and left leaning media push next?

After reading this tweet, please

How much "pleasant" does this tweet imply ?

☐ 5 (Pleasant)

☐ 4 (Pleased)

☐ 3 (Neutral)

☐ 2 (Unsatisfied)

☐ 1 (Unpleasant)

More Information about Emotion labelling

Reading this tweet, label a emotion that best describes it. The question design is based on Valence-Arousal-Dominance (VAD) model. It will give a comprehensive score after considering three independent dimensional emotion, which are valence (pleasant), arousal (excited), and dominance (powerful).

Multiple Experiments

If running multiple experiments, store HIT ids in a DB after creating them

How much do you pay?

Long $200 \times \$1.00 \times 3 = \600

Short $177 \times \$0.50 \times 3 \sim \270

Subtotal $\$600 + \$270 = \$870$

Amazon Fee = $20\% \times \$870 \sim \170 \longrightarrow

[Jeff Bezos BEST laughs
compilation EVER !!!](#)

Remember

First: start with the Sandbox

- Process/verify data

Then: SMALL live experiment (\$)

- Process/verify data

Finally: BIG live experiment (\$\$\$)

Secret url: https://competitions.codalab.org/competitions/25115?secret_key=e3d89637-74fe-41e4-acb5-c734d91edebe
Organized by bshmuell - Current server time: June 4, 2020, 10:53 a.m. UTC

Current	Next	End
Practice & Development May 5, 2020, midnight UTC	Post-Evaluation June 8, 2020, midnight UTC	Competition Ends Never

Part 1: Data Exploration

Write code that will compute and print the following training data statistics:

- Number of samples that have N categories, for $1 \leq N \leq 6$
- Category distribution (how many times does each category appear)
- 10 most common pairs of co-occurring categories
- Optional: any other statistics that you think are useful

Part 2: Prediction

Write code that will create the following 2 prediction files.

1. Majority Prediction (Baseline!)

- Always predict the same 6 majority labels

2. Naive Bayes (expect bad performance -- for PRACTICE only!)

- **Use 90% for training, use 10% for testing**
- Only consider first GIF category in each sample (for simplification)
- Compute sklearn TF-IDF vectorizer (TfidfVectorizer), **default settings**
- Use sklearn Multinomial Naive Bayes classifier (MultinomialNB), default **settings**
- For each sample, pick the 6 highest-probability categories
- **Check: is the performance on your test data similar to the performance on the evaluation data?**

Upload the predictions to the **secret NCTU-only** website.

For more information about the prediction files to be uploaded, see [Phase 1](#) and [Submission Format](#).

Deliverables

- ✓ Colab Notebook with Part 1 & Part 2
- ✓ Two submissions to **secret** NCTU website

SOP for assignment submission

- ☐ Open your Python notebook
- ☐ Rename your notebook to lab5-<TeamName>.ipynb
- ☐ “Restart and run all”
- ☐ Make sure the output is correct
- ☐ Download the Python file (File, Download .py)
- ☐ **Share the Google colab using “Get shareable link”; Copy link**
- ☐ Submit both link and file in e3:
 - ☐ Paste link into e3 (link starts with <https://colab.research.google.com/...>)
 - ☐ Upload file into e3 (file name is lab5-<TeamName>.py)

How to proceed

- Other vectorizers
- Other classifiers
- Consider the data imbalance
- Consider all categories, not only the first one
- Using ideas we learned in class/labs
- Check carefully -- we didn't use all the data fields in the file
- Use techniques from Machine Learning/Deep Learning
- Lots of online info
- Think out of the box :)
